### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

The abstract should be replaced with the following:

This invention provides a rolling method and a rolling apparatus, for flat-rolled metal materials capable of stably producing flat-rolled metal materials not having, or having extremely little, camber. A rolling method for a flat-rolled metal material uses rolling equipment including a rolling mill and at least a pair of pinch rolls for clamping a rolled material on the exit side of the rolling mill having a mechanism in which either one, or both, of upper and lower roll assemblies have a mechanism for supporting a work roll by split backup rolls split into at least three segments in an axial direction, the split backup roll group having a construction for supporting both a vertical direction load and a rolling direction load acting on the contacting work roll and each of the split backup rolls independently having a load measuring device.

### *Allowable Subject Matter*

It is in the opinion of the examiner that the art of record neither anticipates nor renders obvious "calculating a difference  $F_r^{af}$  between rolling direction force acting on said work rolls at a right side (operator side) of said work rolls and rolling direction force acting on said work rolls at a left side (drive side) of said work rolls through the rolled material using imaginary rolling

direction force  $Fr^W$  and  $Fr^D$  acting between the rolled material and the work roll evaluated at the work roll chock position on the operator side and the driving side based on a measured value of backup roll load measured on each segment of said entry side split backup roll and measured on each segment of said exit side split backup roll by each independent load measuring device and the formula below:  $Fr^D - Fr^W = (2/a_w)\sum_i q_i \cos \theta_i - (F^W - F^D)$  responsive to said calculated difference  $Fr^{dif}$  of rolling direction force, controlling left-right difference of roll gap between said upper work roll and said lower work roll to result in said calculated difference  $Fr^{dif}$  of rolling direction force approaching zero, wherein:  $Fr^W$  and  $Fr^D$  are imaginary rolling direction force when the rolling direction forces acting between the rolled material and the work roll are evaluated at the work roll chock positions on the operator side and the driving side, respectively;  $q^i$  is the measurement value of the  $i$ th split backup roll load;  $\theta_i$  is an angle between each split backup load operation line direction and the horizontal line (entry side split backup roll has an acute angle and the exit side split backup roll has an obtuse angle);  $Z_i$  is the barrel length center position of each split backup roll expressed by roll axial direction coordinates with a mill center being an origin;  $a_w$  is a center distance between an operator side chock and a driving side chock;  $F^W$  and  $F^D$  are the actual values of the horizontal direction roll bending force acting on the work rolls on both operator and driving sides wherein  $F^W$  and  $F^D$  are omitted when the horizontal roll bending force is not provided" in combination with the rest of the claimed limitations set forth in the independent claim.

Searching by the Examiner yielded prior art as cited in the previous Office Actions. Therefore, it is concluded by the examiner that claims 7 and 8 of the present invention are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
